INSTRUCTIONS: ANSWER ALL THE QUESTIONS IN PEN YOU MAY NOT USE A CALCULATOR GOOD LUCK!

Question 1

Answer the following True or False questions and give a short justification/counter-example:
a) $S_{5}$ has an element of order 6 .
b) The cyclic group $\mathbb{Z}_{18} /\langle 6\rangle$ is isomorphic to $\mathbb{Z}_{6}$.
c) If $G$ and $H$ are cyclic groups, then $G \times H$ is cyclic.
d) If $\varphi$ is a homomorphism with $\operatorname{Ker} \varphi=\{e\}$ then $\varphi$ is 1-to-1.

Question 2
a) Let $G$ be an Abelian group and let $H=\left\{a \in G: a^{2}=e\right\}$ be a subset of $G$. Use the Two-StepSubgroup Test to show that $H$ is a subgroup of $G$.
b) Show that $H$ as defined in a) is not a subgroup of $G$ if $G$ is not Abelian by giving a counterexample.

Question 3
Let $G=(\mathbb{Z},+)$ and let $G^{\prime}=(\{n \in \mathbb{Z}: n$ is even $\},+)$. Show that $G$ and $G^{\prime}$ are isomorphic by showing that the function $\varphi: G \rightarrow G^{\prime}$ defined by $\varphi(n)=2 n$ is an isomorphism.

## Question 4

Let $G=G L(2, \mathbb{Q})$, the set of all invertible $2 \times 2$ matrices with rational entries and with matrix multiplication as operation. Let $H=\left\{\left[\begin{array}{ll}1 & a \\ 0 & 1\end{array}\right]: a \in \mathbb{Q}\right\}$ be a subgroup of $G$. Show that $H$ is not a normal subgroup of $G$, i.e. find a $g \in G$ such that $g h g^{-1} \notin H$ for some $h \in H$.

Question 5

Let $G=\left\{\left[\begin{array}{ccc}1 & a & b \\ 0 & 1 & c \\ 0 & 0 & 1\end{array}\right] \in M_{33}: a, b, c \in \mathbb{R}\right\}$ be a subgroup of $G L(3, \mathbb{R})$ (with matrix multiplication as operation).
a) Show that the function $\varphi\left(\left[\begin{array}{lll}1 & a & b \\ 0 & 1 & c \\ 0 & 0 & 1\end{array}\right]\right)=(a, c)$ is a group homomorphism from $G$ to $\mathbb{R} \oplus \mathbb{R}$ (with component-wise addition as operation).
b) Find the kernel of $\varphi$.

Question 6

Let $\varphi: G \rightarrow G^{\prime}$ be a one-to-one homomorphism. Show that if $y^{3}=e$ for all $y \in G^{\prime}$, then $x^{3}=e$ for all $x \in G$.

Question 7
a) Let $H$ be a subgroup of a group. Prove that $H$ is normal in $G$ if and only if $x H x^{-1} \subseteq H$ for $x \in G$.
b) Let $\varphi$ be a homomorphism from a group $G_{1}$ to a group $G_{2}$. Given that $\operatorname{Ker} \varphi$ is a subgroup of $G_{1}$, prove that $\operatorname{Ker} \varphi$ is normal.
c) Let $\varphi$ be a homomorphism from a group $G_{1}$ to a group $G_{2}$, and $\psi: G_{1} / \operatorname{Ker} \varphi \rightarrow \varphi\left(G_{1}\right)$ an isomorphism. Show that $\psi$ is well-defined.

## Question 8

Consider the graph below and answer the following questions:

a) Use the Floyd-Warshall algorithm to determine which vertices are connected and to find the shortest paths for these vertices. You may use the table below for your final answer.

|  | A | B | C | D | E | F | G |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A |  |  |  |  |  |  |  |
| B |  |  |  |  |  |  |  |
| C |  |  |  |  |  |  |  |
| D |  |  |  |  |  |  |  |
| E |  |  |  |  |  |  |  |
| F |  |  |  |  |  |  |  |
| G |  |  |  |  |  |  |  |

b) What is the shortest distance from A to F? Give the path to follow to obtain this distance.

## Question 9

Consider the graph below and answer the questions that follow:

a) Suppose that Dijksra's algorithm is run to determine the shortest path from A to H in the graph. Complete the following table:

| Step | A | B | C | D | E | F | G | H | La <br> Tran <br> fe | Perm |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Initial | $(-, 0)(-, \infty)(-, \infty)(-, \infty)(-, \infty)(-, \infty)(-, \infty)(-, \infty)$ |  |  |  |  |  |  |  | A | $\{\mathrm{A}\}$ |
| 1 |  |  |  |  |  |  |  |  |  |  |
| 2 |  |  |  |  |  |  |  |  |  |  |
| 3 |  |  |  |  |  |  |  |  |  |  |
| 4 |  |  |  |  |  |  |  |  |  |  |
| 5 |  |  |  |  |  |  |  |  |  |  |
| 6 |  |  |  |  |  |  |  |  |  |  |

b) Now, write down the shortest path from A to H as read from the table in a ). What is the length of this path?
