UNIVERSITY
OF
JOHANNESBURG

FACULTY OF SCIENCE

DEPARTMENT OF PURE AND APPLIED MATHEMATICS

MODULE: **ADVANCED BIO & ENVIRO MATH & STATS – MAT1D01**

CAMPUS: **APK**

ASSESSMENT: **FINAL SUMMATIVE ASSESSMENT**

SECTION: **STATISTICS**

DATE: **28 NOVEMBER 2016**

ASSESSORS: **MISS JR TSUEN**

INTERNAL MODERATOR: **MR V VAN APPEL**

DURATION: **1 HOUR**

40

INITIALS AND SURNAME: _____

STUDENT NUMBER: _____

CONTACT NUMBER: _____

NUMBER OF PAGES: **10 (INCLUDING COVER PAGE)**

INSTRUCTIONS:
- **ANSWER ALL THE QUESTIONS IN PEN**
- **NO PENCIL OR TIPPEX ALLOWED**
- **SHOW ALL THE NECCESARY CALCULATIONS CLEARLY**
- **STATE ALL FORMULAS USED AS THEY ARE MARK-CARRYING**
- **CALCULATORS ARE ALLOWED**
- **WHERE NECESSARY, ROUND OFF TO TWO DECIMAL PLACES**
- **QUESTIONS CAN BE ANSWERED IN ANY ORDER**

Question 1   **[14]**

The average lifespan of a western honey bee is 5 months with a population standard deviation of 1.75 months. It is believed that pesticides used on farms is harming the western honey bees which play a vital role in the pollination of the plants. A sample of honey bees is found to have an average lifespan of 3.5 months.

1) State the hypotheses to test if the average lifespan of a western honey bee is less than 5 months.   [2]

2) Give the formula of test statistic to be used. Explain your answer.   [2]

3) Draw the rejection region and state the rejection rule for a test at 5% significance.
                                                                                [3]

4) Calculate the test statistic.   [1]

5) State your conclusion, motivate it and interpret your findings.   [3]

6) Use the p-value method to confirm your answer above.   [1]

7) What error are you subject to? Describe with reference to this specific question when we would make this error.   [2]

Question 2   **[8]**

The global concentrations of Carbon Dioxide per year were recorded.

	Year	Carbon dioxide concentration (ppm)
1	1950	310
2	1960	320
3	1970	325
4	1980	348
5	1990	350
6	2000	375
7	2010	385

1) Calculate and interpret the correlation coefficient.   [2]

2) Determine the least squares regression line to predict the carbon dioxide concentration per year.   [2]

3) Calculate what the carbon dioxide concentration was in 1987. State whether this value is reliable or not. Explain your answer.   [2]

4) Would the predicted value of the number of whales for 2015 be more reliable, less reliable or have the same reliability? Explain your answer.   [2]

Question 3   **[13]**

Migraine headache patients participated in a double-blind clinical trial to assess an experimental surgery. The trial entailed 75 patients that were randomly assigned to real surgery or fake surgery. The surgeons considered it a success if there was a substantial reduction in migraine headaches.

	Treatment		
	Real Surgery	Fake Surgery	Total
Substantial Reduction	41	15	56
No Reduction	8	11	19
Total	49	26	75

1) State the hypotheses to test for an association between having surgery and a substantial reduction in migraine headaches.   [2]

2) Calculate the expected values.   [2]

3) Calculate the Chi-Square statistic.   [3]

4) State the rejection rule and draw the rejection region of the null hypothesis for a test at 10% significance.   [3]

5) Conclude, motivate and interpret your answer.   [3]

End of assessment – Total marks 35

FORMULA SHEET

Hypothesis Testing

$$z^* = \frac{\bar{x} - \mu}{\sigma}$$

$$z^* = \frac{\bar{x} - \mu}{\sigma/\sqrt{n}}$$

$$z^* = \frac{\bar{x} - \mu}{s/\sqrt{n}}$$

$$t^* = \frac{\bar{x} - \mu}{s/\sqrt{n}}$$

$$z^* = \frac{p - \pi}{\sqrt{\dfrac{\pi(1 - \pi)}{n}}}$$

Comparing samples

$$t^* = \frac{\overline{x_1} - \overline{x_2} - \mu_1 - \mu_2}{s_{\overline{X_1} - \overline{X_2}}}$$

$$t^* = \frac{\bar{x}_d - \mu_d}{s_d/\sqrt{n}}$$

$$s_p^2 = \frac{(n_1 - 1)s_1^2 + (n_2 - 1)s_2^2}{n_1 + n_2 - 2}$$

$$s_{\overline{X_1} - \overline{X_2}} = \sqrt{\frac{s_p^2}{n_1} + \frac{s_p^2}{n_2}}$$

$$df = n_1 + n_2 - 2$$

Chi-squared

$$\chi^2 = \sum_{i=1}^{m} \frac{(O_i - E_i)^2}{E_i}$$
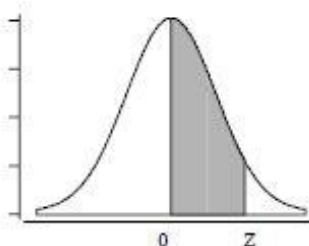

$$df = (r - 1)(k - 1)$$

$$E_i = \frac{row\ total \times column\ total}{grand\ total}$$

Regression and Correlation

$$t_s = r\sqrt{\frac{n - 2}{1 - r^2}}$$

$$b = r\left(\frac{s_y}{s_x}\right)$$
