**QUESTION 1**

Mr Baker is diagnosed with Benign prostatic hypertrophy. The urologist booked the patient for a Trans-urethral resection of the prostate (TURP)

1.1 Develop a nursing care plan for Mr Baker include four (4) nursing diagnoses.

Use the following format:

Nursing diagnosis (4) marks	Related to (4×½) =2marks	As evidenced by (4×½) =2marks	Expected outcome (4×½) =2marks	Interventions (4per diagnosis 4×½)=2 (4×2)=8marks	Rationale  8marks
--------------------------------	-----------------------------	----------------------------------	--------------------------------------	--	-------------------------

\*[26]

**QUESTION 2**

Mr G, a 31year-old construction worker, was admitted to the medical ward with cold sweats, chills, a deep productive cough with thick, rust-colored sputum, and generalized muscle and joint pain.

**Subjective data:**

He had a "chest cold" and was taking various antihistamines and decongestants that brought no relief. He complains of increased difficulty in breathing.

**On physical examination:**

- dusky nailbeds and mucous membranes and shallow respirations
- temperature - 40°C,RR 28, Pulse 114bpm,
- auscultation breath sounds were barely audible in the lower lobes and crackles and rales were heard

Chest X-Ray was suggestive of bilateral lobar pneumonia of the lower lobes.

2.1 Describe twelve (12) specific Nursing interventions with rationale related to the above scenario
